

Lazer Safe Brand Guide

Logo Versions

The logo is available in a variety of versions depending on where they are applied and how they are to be reproduced. A reversed and mono version has been created when full-colour isn't available or suitable.

File Formats

The different logo versions are supplied in formats suitable for their intended use. Using the correct logo in the correct format will ensure the best reproduction.

EPS (Encapsulated PostScript)

EPS files are intended to be used in commercial offset, digital or large format printing applications. These are vector files which can be resized without any loss of quality.

PNG (Portable Network Graphic)

PNG files are bitmapped images that employ lossless data compression. PNG is designed for electronic use - websites, PowerPoint, email etc. PNG files use full-colour RGB or Greyscale and support multiple levels of transparency, they do not support other color spaces (such as CMYK or Spot).

SVG (Scalable Vector Graphic)

SVG files are vector files that can be resized without any loss of quality. They are designed for digital and web use and can be used in place of PNGs.

RGB, MONO and REVERSED - websites, video, email, MS Word, Excel, PowerPoint.

CMYK - offset, digital or large format printing (eg brochures, newspaper and magazine ads, posters, billboards, signage, etc).

SPOT - screenprinting, embroidery, vinyl, paint, etc.

MONO - offset, digital or large format printing where colour is not supported.

REVERSED - offset, digital or large format printing when logo is on a dark background.

If you're unsure which format is best for the intended use - contact Axiom Design Partners info@axiom.com.au.

Logo Versions

Using the Logo with the Tagline

When the tagline is used on the same plane as the logo, they should be kept proportional with each other.

Brand Guide

Corporate Colour Palette

Colour association is important for any brand, colour conveys emotion and the choice of colours for you have been carefully considered.

The swatches to the right show the corporate colours from the Pantone Matching System as well as their closest match for process printing, on-screen display and web.

Please note that colours may vary in appearance depending on how it is being reproduced; in particular the on-screen (RGB) and web values (HTML) appear differently between programs, displays and operating systems, therefore these values are a guide only and may need to be manually adjusted to suit the application.

Gradient

The Lazer Safe pattern use a gradient, that can be used for other applications. The swatches to the right show how the gradient are composed.

Secondary Colour Palette

The secondary colour palette is to be used sparingly.

Lazer Safe Brand Guide

Pattern

The Lazer Safe pattern consists of 4 layers which are primarily used together.

Lazer Safe

Brand Guide

Corporate Typefaces

Marketing Fonts

TWK Everett is the typeface chosen for headings as the sharp, squared corners of the typeface mimic the bend made by a press brake and is perceived strong and contemporary.

Area Normal is the typeface for body copy as it is highly legible at all sizes. It is also available in a wide array of weights and styles.

Internal Business Document Fonts

Aptos should be used for all internal documents as Area Normal and TWK Everett is not available on all systems - they should be reserved for marketing applications only.
